

The graph displays the performance of 10 models over 25 time steps. The models are identified by color in the legend: Blue, Orange, Red, Purple, Green, Yellow, Brown, Gray, Dark Green, and Light Green. Each model's performance is shown as a line with markers, and a shaded gray area represents the uncertainty or confidence interval. The models exhibit diverse behaviors: some rise quickly and peak early (e.g., Dark Green peaks around step 12), while others rise more gradually and peak later (e.g., Yellow peaks around step 15). Most models show a decline in performance after their peak, with some stabilizing at a low level by the end of the 25 steps.
